ARCHITECTURE OVERVIEW  
System: SIPA (Soul In PsyAbstract)  
Author: Aelin AquaSol

Date: 2026-01-07  
Status: Active (Governance)

## 1. Purpose & Scope

This document describes the architecture, governance layers, and audit methodology of the SIPA system.

It is intended for:

- grant committees
- institutions
- auditors

This document does NOT:

- describe psychology
- describe the user as a person
- make enforcement claims without implementation
- infer intent or internal states

## 2. Layered Architecture

### CORE\_V2 – Canon / Governance

Defines: what is allowed and forbidden / admissible interpretations / truth conditions

Contains: Interpretation Control / IWE Blacklist / governance declarations

Properties: immutable / time-independent / no runtime / no execution claims

### CORE\_V2.1 – Runtime / Execution Governance

Defines: how canon is executed over time / mandatory order of actions /

artifact structure / validation rules (TSV, SHA256, audit)

Includes: day consistency rules / snapshot/rewrite/close-day logic / INVALID/SAFE MODE rules

Properties: procedural / non-psychological / mandatory for production / does not modify CORE\_V2

### CORE\_V2.2 – Execution Environment (SIPA OS)

Defined but NOT IMPLEMENTED.

Intended role: enforced filesystem separation / runtime watchdogs / non-declarative enforcement

Current status: inactive / no enforcement claims permitted

## 3. Governance vs Execution

Governance defines: what is legal / what is forbidden  
Execution defines: how and when actions occur

Rules:

- no mixing of law and ritual
- no enforcement claims without environment
- no interpretation without evidence

#### 4. Audit & Fixation Method

Artifact: any file fixed via terminal / hashed with SHA256 /  
logged in AUDIT.log  
Fixation: creation or rewrite of an artifact / always logged /  
never inferred

Principles:

- one day = one canonical day snapshot
- rewrite instead of duplication
- no parallel truths

#### 5. Android as Declarative Layer

Android filesystem does NOT provide enforced read-only guarantees.  
Therefore:

- chmod flags are decorative
- no enforcement claims are valid
- Android is used for declaration and observation only

This is a design choice, not a limitation.

#### 6. Current System Status

CORE\_V2: Active (Governance)  
CORE\_V2.1: Active (Execution Rules)  
CORE\_V2.2: Declared, NOT IMPLEMENTED

## ПАРАЛЛЕЛИ С V9.6

| Элемент 2026-01-07                           | Наследник в V9.6                       |
|----------------------------------------------|----------------------------------------|
| CORE_V2 (Canon/Governance)                   | HUB_CORE_CANON / CLAUDE-BRIEF.md       |
| CORE_V2.1 (Runtime/Execution)                | HUB_LEGAL_FORENSIC / BIN/ / cron       |
| CORE_V2.2 (SIPA OS, NOT IMPLEMENTED)         | SIPA OS V9.6 — теперь реализован       |
| IWE Blacklist (Inference Without Evidence)   | ANTI-AMBIGUITY / Rule #3<br>FACTS ONLY |
| “no mixing of law and ritual”                | SIPA Isolation Principle               |
| “one day = one canonical day snapshot”       | DAY_BOOT /<br>REWRITE_LATEST_BOOT      |
| “rewrite instead of duplication”             | REWRITE_LATEST_BOOT.sh                 |
| “no parallel truths”                         | CANON = READ ONLY                      |
| “Android = declaration and observation only” | Телефоны = Termux ноды, не production  |
| Intended for grant committees / auditors     | EIC EUR 2.5M / YC / ИА<br>документы    |

## КЛЮЧЕВЫЕ ВЫВОДЫ

**CORE\_V2.2 = “Declared, NOT IMPLEMENTED”** на 07.01.2026. Сейчас, 2026-07-02, SIPA OS V9.6 работает. Это и есть реализованный CORE\_V2.2. Декларация стала системой за 6 месяцев.

**“Android is used for declaration and observation only. This is a design choice, not a limitation.”** Это честность об ограничениях + переформулировка как архитектурное решение. Та же логика применяется к V9: ограничения = архитектурные выборы.

**Аудитория: grant committees / institutions / auditors** Уже в январе 2026 документ писался для внешней аудитории. Это не внутренняя заметка — это публичный артефакт системы.
